REPRESENTING IMS MESSAGES AS XML DOCUMENTS

ABSTRACT OF THE DISCLOSURE

A computer-implemented method for representing IMS messages as XML documents includes generating an XML document template from an IMS message definition and merging an IMS message with the generated template to produce a corresponding XML document. A system for representing IMS messages as XML documents includes a template generation module configured to generate an XML document template from an IMS message definition and a merging module configured to merge an IMS message with the generated template to produce a corresponding XML document.
